

Final Project (50 Marks)

Submission Deadline: 18th February, 2025

Each student/group (maximum 2 students in one group) selects a unique business (e.g., a local business, an online retailer, a non-profit organization) and conducts a comprehensive marketing analytics project tailored to that business.

A: Comprehensive Marketing Analytics Project Structure

1. Customer Segmentation (10 Marks)

- **Objective:** Generate artificial data using R and implement one segmentation technique.
- **Steps:**
 1. Use R to create artificial customer data. You can use packages like dplyr and tidyr to simulate realistic data.
 2. Choose a segmentation technique (e.g., k-means clustering, hierarchical clustering, or LPA/LCA).
 3. Implement the chosen technique and visualize the results.
 4. Interpret the segments and suggest targeted marketing strategies for each segment.
- **Tools:** R, ggplot2, dplyr, tidyr
- **Example:** For a local coffee shop, segment customers based on purchase frequency, average spend, and preferred product types.

2. Conjoint Analysis (10 Marks)

- **Objective:** Perform a conjoint analysis.
- **Steps:**
 1. Create or find a dataset relevant to your business.
 2. Use R to perform a conjoint analysis, assessing how different attributes influence customer preferences.
 3. Interpret the results to inform product or service design.
- **Tools:** R, conjoint package
- **Example:** For a clothing retailer, analyze how different combinations of price, brand, and quality affect customer choices.

3. Google Analytics (10 Marks)

- **Objective:** Show five types of analytics using the Google Analytics demo account.
- **Steps:**
 1. Access the Google Analytics demo account.
 2. Explore different types of analytics such as Audience Overview, Acquisition Overview, Behavior Flow, Conversion Goals, and a custom report.
 3. Take screenshots and explain each type of analytics.
- **Tools:** Google Analytics
- **Example:** Demonstrate user demographics, traffic sources, and popular content pages for an online store.

4. Keywords & Social Media Marketing (10 Marks)

- **Objective:** Find two long-tail keywords and justify their selection. Create a social media ad (include keywords based on your search)
- **Steps:**
 1. Use keyword research tools like Google Keyword Planner/Semrush or any other to find relevant long-tail keywords.
 2. Justify your selection based on search volume, Domain Authority or Page Authority or Keyword difficulty, and relevance to your business.
 3. Provide data points to support your choices.
- **Example:** For a travel agency, select keywords like “affordable family vacations” and “luxury relaxation packages” based on search trends and competition.
 4. Design a social media ad for platforms like Facebook or Instagram.
 5. Include an image, headline, description, and call-to-action.
 6. Take a screenshot and add it to your report.
- **Example:** Create an Instagram ad for a new product launch with an engaging image and a discount code.

5. Tableau (10 Marks)

- **Objective:** Create a Tableau dashboard using Tableau Sample dataset.
- **Steps:**
 1. Use Tableau’s inbuilt datasets to create a dashboard.
 2. Include at least three types of analysis (e.g., bar charts, line charts, maps).
 3. Take screenshots of the dashboard and describe each analysis.
- **Tools:** Tableau
- **Example:** Create a dashboard showing sales trends, regional performance, and product category analysis for a retail store.
